## New dispensing items available

Spartan Chemical Company, Inc. now offers twelve new dispensing promotional items. These items will help you comprise a system of self-venting, captive closures that is a safe, economical way of containing and dispensing Clothesline Fresh Laundry and SparClean Warewash products. With the new captive closures, your dispensing operations are cleaner, safer and more efficient. The closure system is available for gallons, pails and 15 and 55 gallon drums.

Items are ordered independent from the products, and a full chart of information on the new items is included with this Sparta-gram. The system features an automatic, self-venting and anti-reversing check valve in the insert. The matching cap adaptor unlocks the system when mated to the insert, allowing a controlled product flow. If the cap adaptor is removed for any reason, the valve closes, automatically preventing any accidental spills and loss of product. The benefits of the captive closure system include increased end user safety, hazardous spill prevention, and optimization of product performance.

Complimenting the gallon sizes used in this system is a new gallon wire storage rack, which holds and locks four 1-gallon round containers to any wall. Additionally, over the next few months we will be transitioning the lids on our SparClean Warewash pails (except Pot & Pan Detergent) to utilize caps that work with these new captive closures. The "pull-out" component is not included on these new pail lids, making for safer handling of the products.
